

Alex Morgan

Software Engineer | Cover letter

AI Systems Engineer

Wattle Research Studio | Brisbane, Queensland, Australia

Dear Hiring Team,

I am interested in the AI Systems Engineer role at Wattle Research Studio. Your focus on dependable internal tools aligns with my experience using Python to test AI-assisted workflows and document human review checkpoints.

I bring experience developing applications backed by SQL and Azure services, as well as React interfaces and TypeScript APIs. This background helps me connect workflow requirements with the application and data systems that support them.

I would welcome the opportunity to discuss how my software engineering experience could support your integrations and testing work. Thank you for your consideration.

Kind regards,

Alex Morgan
