Application Developer - PowerApps

Harbour Civic Systems | Sydney, New South Wales, Australia

Dear Hiring Team,

I am interested in the Application Developer - PowerApps role at Harbour Civic Systems. Your focus on reliable business applications aligns with my experience developing Power Apps forms and Power Automate workflows backed by SQL and Azure services.

I have also built accessible React interfaces and TypeScript APIs for internal tools. That work gives me practical experience translating requirements into usable applications, while testing changes and documenting decisions for the people who maintain them.

I would welcome the opportunity to discuss how my application development experience could support your team. Thank you for considering my application.

Kind regards,

Alex Morgan
